Objective

Inventive and organized software developer seeking a Junior Software Developer position where I can collaborate in team-based development and apply my experience in C#, Java, PHP, and database-driven web applications.

Highlights of Qualifications

- Strong background in C# with experience in Java and PHP
- Designed, deployed, tested, and maintained software systems
- Skilled in problem-solving, teamwork, and managing development workflows
- Supported customer bug reports, suggestions, and issues in a live multiplayer game server
- Developed and deployed a web application complete with database systems
- Comfortable collaborating in team-based development environments

Technical Skills

Languages:

- **Advanced:** C#
- **Proficient:** Java, PHP, SQL, Python
- **Familiar:** C, GDScript, JavaScript, TypeScript, Bash/Shell, Assembly

Tools:

- **Advanced:** Git, Jira
- **Proficient:** ASP.NET Core MVC/Razor, PostgreSQL, Azure
- **Familiar:** Godot Engine, Bootstrap, React, Flutter

Concepts:

- **Advanced:** Object-Oriented Programming (OOP), Database Design, Game Development
- **Proficient:** Web Application Development, Test-Driven Development (TDD)
- **Familiar:** Data Structures & Algorithms, SDL

Education

Studied Computing Science

Aug 2023 – Expected Dec 2027

Thompson Rivers University - Kamloops, British Columbia
Overall GPA: 3.68

Studied Computer Programming and Analysis

Sept 2024 – Expected April 2027

George Brown Polytechnic – Toronto, Ontario
Overall GPA: 3.94 | Dean's List, all years

Focus Fae – Lead Back-End Developer

Jan 2026 – April 2026

Technologies: Godot Engine, GDScript

- Developed a gamified productivity-focused desktop application featuring task management and habit tracking systems
- Integrated a Pomodoro-style focus timer with start, pause, and reset functionality
- Engineered a progression system with experience points, leveling, and in-app currency
- Built a virtual companion system reflecting user progress and engagement
- Assembled inventory and shop systems for cosmetic items and rewards
- Implemented local data persistence to store user progress, tasks, and settings

- Collaborated with a team following Agile practices, including sprint planning, task tracking, and progress reporting

Ticket Purchasing Web Application – Full Stack Developer

Sept 2026 – Dec 2026

Technologies: ASP.NET Core, Azure, SQL / Supabase

- Developed a web application for purchasing and managing event tickets
- Implemented backend web services using ASP.NET Core
- Deployed the application using Microsoft Azure
- Designed and integrated a database for user and ticket management
- Collaborated with team members to plan, track, and complete development tasks

Associate's degree in Specialized Technology in Patisserie and Baking

June 2008 – April 2010

Le Cordon Bleu Institute of Culinary Arts - Pittsburgh, PA

Work Experience

Game Developer/Owner

Jan 2019 to Present

Geeky Gamers - Windsor, NS

- Developed and maintained a live multiplayer game server using C#
- Designed and implemented custom gameplay systems, mechanics and maps
- Built and deployed server features, dispatching bug fixes and content updates
- Managed version control and team collaboration using Git and Jira
- Established a profitable business model through custom game services and server operations
- Maintain live server environment and resolve bugs and player issues

Executive Pastry Chef

2010 to 2017

Various Restaurants – Washington, DC & Bethesda, MD

- Led teams of 6-12 in high-volume kitchens, managing daily operations and staff
- Controlled food and labor costs at 20% while maintaining quality standards
- Trained and supervised staff, improving team efficiency and consistency
- Developed and tested new recipes for high-volume restaurants, hotels, and bakeries
- Managed multiple high-priority tasks simultaneously while under strict deadlines

Personal Projects

Kitchen Sync – Solo Developer (In Progress)

Technologies: Flutter, Dart

- Design and develop a mobile application for tracking dietary intake and managing recipes
- Implement features to log meals and calculate nutritional data, including macronutrient tracking
- Structure recipe management with an emphasis on organization, usability, and visual presentation
- Plan synchronization features to share data between multiple users
- Build a responsive and user-friendly interface using Flutter
